ENVIROMENTAL SCIENCE

Department of Environmental Science

Chairperson: George P. Cobb
Graduate Program Director: Cole W. Matson

The Department of Environmental Science is dedicated to educating students in both the scientific and policy dimensions of environmental issues. Our goal is to provide a research and education environment where students learn to be stewards of the earth.

The Department of Environmental Science offers three degree options:
1. Master of Science in environmental science
2. Master of Environmental Studies, non-thesis option
3. Doctor of Philosophy in environmental science

Bachelor of Arts majors in a science discipline may petition for the Master of Science in environmental science.

The Environmental Science department welcomes graduate student candidates with diverse academic backgrounds. Students from majors such as anthropology, aviation science, biology, chemistry, engineering, geography, science education, and policy are encouraged to apply. The department has developed a core curriculum consisting of foundational coursework associated with the philosophy of the program - competencies. These foundational competencies are designed to give the student a common knowledge base for scientific research in the Environmental Science program. Students will take a class from 4 of the 5 core competency areas outlined below:

- Statistical Science or Data Analysis or Data Interpretation or Modeling
- Environmental Toxicology
- Environmental Chemistry
- Environmental Risk Assessment
- Ecological and Environmental Systems

The program offers advanced courses in specialized areas such as water resources, natural resource management, environmental toxicology, and environmental chemistry. Under the direction of a major advisor, graduate students may either focus their course work in a specific area, such as water quality, or they may pursue courses that provide a broad background in environmental issues. Graduate students may also take courses offered in other departments, such as Biology, Chemistry, and Geology, if the courses are appropriate to environmental science or studies and the graduate student's professional goals.

Financial assistance is available for departmental doctoral students in the form of teaching assistantships, research assistantships, and scholarships. Loans and other types of aid are available through the Student Financial Aid Office.

Students selecting a thesis option may conduct research in the Waco area, outside the region or internationally. Environmental Science graduate students have conducted research in Asia, Europe, and Central America. Departmental laboratory facilities provide instrumentation and computer support in geographic information systems, computer modeling, water quality analysis, air quality monitoring, and biofuels production. The program engages in field research in a variety of ecosystems, including riparian corridors, reservoirs, grasslands, wetlands, temperate forests, tropical forests, and coastal barrier islands. Current faculty research interests include the social impacts of ecotourism, human dimensions of climate change, wastewater management, water quality, ecotoxicology, improved production of biofuels, conservation of biodiversity, and the ethics of natural resource communities.

Thesis options are appropriate for students interested in research and academic careers, research interest, those pursuing a terminal degree, or those planning careers that require extensive preparation of environmental documentation or plans. A non-thesis option with a required practicum is available for the Master of Environmental Studies (M.E.S.) degree. The semester-long practicum may be either paid or volunteer and must be under a professional supervisor. The non-thesis option is appropriate for students seeking employment in K-12 education, management in environmental organizations, or similar fields. The non-thesis option is not recommended for students planning to pursue a terminal degree, such as a Ph.D.

Objective
The objective of all four degree programs is to train technically competent individuals to assess problems involving environmental issues, to design workable plans, to undertake or direct planned actions toward environmental problem solving, and to work in interdisciplinary teams.

Admission
For admission to the graduate program, candidates must:
1. Meet the general requirements set forth by the Graduate School.
2. Demonstrate an academic background that is adequate to undertake the course of study that has been defined as the candidate's major area of interest.
3. Present a GPA from undergraduate disciplines that is predictive of success in this program and that supports the candidate's graduate area of interest.

Environmental Science (ENV)

ENV 4302 Team Problem Solving in Environmental Studies (3)
Students will contribute the skills of their specializations to analyze and to suggest a solution to a current environmental problem. May be repeated once with a change of content.

ENV 4304 Aquatic Chemistry (3)
Prerequisite(s): ENV 3387 or consent of instructor
Concepts and issues in aquatic chemistry, including chemical equilibria of natural waters and anthropogenic impacts. Required field trips.
ENV 4307 Environmental Law (3)
Cross-listed as PSC 4307
Pre-requisite(s): Upper-level standing or consent of instructor
Fundamentals of environmental protection laws in the United States, including the evolution of environmental law in the areas of case law, common law, and administrative law. Topics include air and water quality, toxic and hazardous substances, endangered species, and wetlands and coastal management issues.

ENV 4308 Air Quality Regulation (3)
Reviews history and policy of United States, transboundary, and global air pollution and resulting environmental regulations.

ENV 4310 World Food Problems (3)
Cross-listed as ANT 4311
Pre-requisite(s): Upper-level standing
A seminar approach with emphasis on the various causes of malnutrition including the ecological basis for food production, the impact of economics and politics on food production and distribution, and the consequences of malnutrition.

ENV 4318 Heavy Metals & Global Public Health (3)
Pre-requisite(s): BIO 1305 or BIO 1405, BIO 1306 or BIO 1406, CHE 1301, and CHE 1302, and upper level standing
Examines the impacts of natural and anthropogenic sources of metals on human health and the relationship between natural geological factors and health in humans and animals in the context of geographic significance and public health responses.

ENV 4322 Climate Anthropology (3)
Cross-listed as ANT 4321
See ANT 4321 for course information.

ENV 4323 The Environment and Economic Analysis (3)
Cross-listed as AVS 4323, ECO 4323
Pre-requisite(s): ECO 1305 or 2306, and upper level standing
Economic analysis in description, analysis, and policy formulation of environmental problems such as natural resource development, ecology, energy needs, noise, water, and air pollution. Economic tools used will include social welfare analysis, externalities, and benefit cost analysis.

ENV 4325 Human Health Risk Assessment (3)
Pre-requisite(s): ENV 3314 or concurrent enrollment in ENV 3314; or consent of instructor
Concepts, data sources, and methodologies used in the field of human health risk assessment, including environmental hazard identification, dose-response assessment, exposure assessment, risk characterization, and risk communication. Required project utilizing professional risk assessment software.

ENV 4327 Human Catastrophe and Cultural Response (3)
Cross-listed as ANT 4327
See ANT 4327 for course information.

ENV 4330 Urban Political Processes (3)
Cross-listed as PSC 4330
Political institutions and processes in metropolitan areas, including social, economic, and governmental problems resulting from increased urbanization. Students will also apply this knowledge in engaged learning projects.

ENV 4333 Coastal Zone Management (3)
Pre-requisite(s): Upper-level standing
Strategies for managing beaches, deltas, barrier islands and coastal seas, including issues in flood and storm risk, pollution mitigation, recreational development and fisheries exploitation.

ENV 4335 Applied Environmental Impact Analysis (3)
Government regulations and increased citizen awareness relationship to the impact of plans and projects on the environment. The course includes an examination of major environmental legislation and its impact on decision making in the public sector. Legislative Acts pertinent to the development of Environmental Impact Analysis are studied.

ENV 4340 Environmental Archaeology (3)
Cross-listed as ANT 4340, ARC 4340
See ANT 4340 for course information.

ENV 4344 Fundamentals of Toxicology (3)
Cross-listed as BIO 4344
Pre-requisite(s): CHE 1301, 1302, 3331, BIO 1305,1306, and 3322; or consent of instructor
Basic concepts of toxicology, including historical perspectives, the disposition and metabolism of toxic substances, pharmacokinetics, target organ toxicity, non-organ directed toxicity, toxic agents, industrial toxicology, forensic toxicology, environmental toxicology, toxicity testing techniques, and risk assessment.

ENV 4345 Water Management (3)
Cross-listed as GEO 4345
Interdisciplinary field of water management. Scientific, technical, institutional, economic, legal, and political aspects of water management.

ENV 4351 Futuristics (3)
Cross-listed as ANT 4351
See ANT 4351 for course information.

ENV 4355 Sustainability and Natural Resource Management (3)
Principles and methods of managing renewable natural resources such as forests, water, and soils to meet human needs and sustainability objectives. Emphasis will be placed on the social, economic, and ecological dimensions of management activities.

ENV 4362 Applied Anthropology (3)
Cross-listed as ANT 4362
See ANT 4362 for course information.

ENV 4365 The Environment and Energy (3)
Pre-requisite(s): ENV 1301 and upper-level standing
Fundamental concepts of energy: the nature of energy flows and storage, potential and kinetic energy, energy loss and reversible and irreversible processes. Renewable and non-renewable energy sources and the impact of energy consumption on problems of societal sustainability.

ENV 4369 Seminar in Anthropology (3)
Cross-listed as ANT 4369
See ANT 4369 for course information.

ENV 4371 Wetlands (3)
Cross-listed as GEO 4371
See GEO 4371 for course information.

ENV 4374 Global Soil Systems (3)
Cross-listed as GEO 4373
See GEO 4373 for course information.

ENV 4375 Natural Landscape Evaluation and Planning (3)
Cross-listed as GEO 4375
See GEO 4375 for course information.
ENV 4377 Advanced Studies in Wilderness, Parks, and Nature Reserves (3)
Pre-requisite(s): ENV 3306 or consent of instructor
Topics in the management of national or state parks, nature reserves or wilderness areas, such as recreational impacts, disturbance ecology, or environmental interpretation. May be conducted as an off-campus field seminar.

ENV 4380 Restoration Ecology (3)
Cross-listed as BIO 4381
Pre-requisite(s): ENV 2307 and 3306, or BIO 3303 or consent of instructor
Principles and practices for restoring natural systems that have been degraded or destroyed. Emphasis on re-establishment of soils, plants, and animals in terrestrial and aquatic environments. Legislative, political, industrial, and regulatory perspectives considered.

ENV 4386 Remote Sensing (3)
Cross-listed as AVS 4386, BIO 4386, GEO 4386, GEOG 4386
See GEO 4386 for course information.

ENV 4389 American Environmental History (3)
Cross-listed as HIS 4388
Pre-requisite(s): Nine semester hours of history or consent of instructor
An in-depth exploration of the physical, social, cultural, and economic relationships between humans and their environment in America from pre-contact to the present.

ENV 4397 Tropical Environments: Ecology and Sustainable Management (3)
Pre-requisite(s): Consent of instructor and upper-level standing
Off-campus field course exploring tropical ecosystems, such as rainforests and coral reefs. Investigation of past impacts of human cultures, and of sustainable practices for future environmental management. Topics may include agriculture, forestry, aquatic resources, energy production, and ecotourism.

ENV 4430 Mathematical Modeling of Environmental Quality Systems (4)
Pre-requisite(s): MTH 1321 and 1322 or STA 2381; or instructor approval
Introduces the process principles that govern contaminant transport and transformations in multimedia outdoor environments. Covers application of fate and transport models to evaluate pollutant interactions with the biosphere, particularly in the context of human exposure modeling and health risk assessment.

ENV 4440 Statistics for Environmental Scientists (4)
Pre-requisite(s): MTH 1321; and either MTH 1322 or STA 2381; or consent of instructor
Basic principles of statistics and helps students apply statistics to analyze data and interpret results from the perspective of environmental scientists.

ENV 4450 Applied Forest Ecology (4)
Pre-requisite(s): ENV 1301 or BIO 1306
Ecological analysis of forest and woodland structure, energy and nutrient cycling, population dynamics and response to disturbance. Application of concepts to sustainable forest management.

ENV 4485 Introduction to Geographic Information Systems (4)
Cross-listed as AVS 4485, GEO 4485
See GEO 4485 for course information.

ENV 4487 Advanced GIS Analysis (4)
Cross-listed as AVS 4487, ENV 4388, GEO 4487
Principles and techniques for geospatial data collection, manipulation, modeling, visualization, and analysis. Emphasis is placed on current raster modeling techniques, spatial statistical analysis methods, and using GIS as a predictive tool for environmental research.

ENV 4680 Field School in Cultural Anthropology (6)
Cross-listed as ANT 4680
See ANT 4680 for course information.

ENV 4V13 Special Topics in Field and Laboratory Methodologies (1-3)
Pre-requisite(s): Upper-level standing or consent of instructor
A field experience centered on a region, ecosystem type, or environmental issue. Incorporates system-specific sampling methodologies. Requires off-campus field trips. May be repeated up to a total of three credit hours when content differs.

ENV 4V50 Problems (1-3)
Advanced interdisciplinary study of the environment. Subject and hours credit mutually agreed upon by student and directing professor(s) prior to registration. May be repeated for a maximum total credit of three semester hours.

ENV 5102 Current Advances in Environmental Science (1)
This seminar course includes applications of scientific inquiry to environmental science and development of policies that influence the quality of the environment. Graduate students attend seminars and engage the speaker on a weekly basis.

ENV 5155 Advanced In-Situ Instrumentation Techniques (1)
Cross-listed as PHY 5155
See PHY 5155 for course information.

ENV 5188 Advanced Laboratory Methods in Life Sciences (1)
Co-requisite(s): ENV 5288
Advanced Laboratory Methods in Life Sciences is a course for the advanced life sciences student. It explores biochemical and genetic techniques via classroom lectures and discussion as well as active demonstration/participation in the laboratory. Students learn principles and techniques used to evaluate a variety of endpoints across several disciplines.

ENV 5199 Non-Thesis Degree Completion (1)
To fulfill requirements for non-thesis master’s students who need to complete final degree requirements other than coursework during their last semester. This may include such things as a comprehensive examination, oral examination, or foreign language requirement. Students are required to be registered during the semester they graduate.

ENV 5288 Concepts for Advanced Laboratory Methods in Life Sciences (2)
Co-requisite(s): ENV 5188
Concepts for Advanced Laboratory Methods in Life Sciences is a course for the advanced life sciences student. It explores laboratory methods via classroom lectures and discussion as well as active demonstration/participation in the laboratory. Students learn principles and techniques used to evaluate a variety of endpoints across several disciplines.

ENV 5300 Integrative Seminar in Environmental Studies (3)
An in-depth interdisciplinary examination of environmental practices in six areas: the ecosphere, human ecosystems, principles and practices in areas such as the ecosphere, human ecosystems, natural resources and pollution, environment and society, methodology, and emerging themes.
ENV 5301 Global Health and Environmental Aspects of Disaster Risk Reduction (3)
Pre-requisite(s): Graduate standing or permission of instructor
This course studies the global health and environmental concepts of disaster response and risk reduction. Lectures and discussions explore the practical aspects of recent disasters, disease outbreaks, and environmental incidents and the methods, strategies, and tools that could be used to mitigate future disasters.

ENV 5302 Foundations of Environmental Health Science (3)
Cross-listed as HED 5302, PUBH 5302
Overview of current topics in environmental health, including environmental toxicology and disease, food security and safety, risk assessment, air and water quality, waste management, emerging contaminants and diseases, public health concepts of emergency preparedness, environmental regulation, and mitigation of environmental risks.

ENV 5303 Environmental Chemical Analysis (3)
Pre-requisite(s): ENV 3387 or CHE 3331; or consent of instructor
Analytic chemistry techniques used in environmental science including sampling, wet chemistry, chromatography, and spectroscopic methods.

ENV 5310 Agricultural Ecology (3)
Ecological basis for food production in both temperate and tropical countries with emphasis on understanding the nature of the vulnerability of agriculture to environmental disturbance and on possible mechanisms to improve the stability and sustained productivity of improve the stability and sustained productivity of agricultural systems.

ENV 5311 Advanced World Food Problems (3)
Cross-listed as ANT 5310
See ANT 5310 for course information.

ENV 5315 Research Design and Methods (3)
Pre-requisite(s): Senior or graduate standing; or consent of instructor
Research design and methods. Students produce a comprehensive research proposal in their major field(s) of study and submit for funding to appropriate agency or foundation.

ENV 5321 Energy Economics (3)
Cross-listed as ECO 5321
See ECO 5321 for course information.

ENV 5323 Research Design and Research Methods (3)
Cross-listed as PSC 5323
See PSC 5323 for course information.

ENV 5325 Advanced Methods for Human Health Risk Assessment and Analysis (3)
Pre-requisite(s): Successful completion of ENV 4325, graduate standing, or approval by the instructor
This course introduces students to advanced concepts, data sources, and methodologies used in the field of human health risk assessment and provides them with an understanding of current issues in environmental sciences. Students conduct a quantitative risk assessment, which is demonstrated in the final project that includes a risk management proposal with uncertainty/sensitivity analysis.

ENV 5330 Conservation Biology (3)
Cross-listed as BIO 5330
See BIO 5330 for course information.

ENV 5331 Advanced Climate Anthropology (3)
The primary goals of this course are fourfold: 1) To introduce the student to concepts and principles regarding relationships between climate and human activities; 2) To identify and critically assess the impacts on humans of climate-related events and vice versa, of humans on climate; 3) To explore the consequences of climate change via a wide range of case studies over time and space; 4) To examine the future in terms of climate change projections, the law of evolutionary potential, and factors that influence human responses to climate change.

ENV 5342 Ecological Risk Assessment (3)
Pre-requisite(s): Graduate standing or consent of instructor
A thorough treatment of assessment procedures for quantifying hazardous effects of chemicals on the environment. Topics will include but are not limited to components of risk assessment paradigm, ecological risk assessment for contaminated sites, the precautionary principle, and other contemporary risk assessment issues.

ENV 5350 The Environment and Third World Development (3)
This course introduces students to the field of environmental issues and Third World development with emphasis on sustainable development and ensured environmental security.

ENV 5360 Biological Invasions: Ecology and Management (3)
Cross-listed as BIO 5360
See BIO 5360 for course information.

ENV 5368 Integrated Energy Resource Systems (3)
Cross-listed as AVS 5368
A seminar approach which examines various examples of integrated energy systems combining different renewable and conventional resources.

ENV 5370 Advanced Environmental Toxicology and Chemistry (3)
Pre-requisite(s): Two semesters each of university-level chemistry and biology or consent of instructor
Advanced principles of environmental toxicology, environmental fate of pollutants, and risk assessment. The course will focus on contemporary topics and methodology.

ENV 5373 Advanced Environmental Biotechnology (3)
Pre-requisite(s): Two semesters each of university-level chemistry and biology; or consent of instructor
Special applications of biotechnology in the areas of degradation and remediation of environmental contaminants; environmental implications of genetic engineering.

ENV 5376 Advanced Urban and Regional Comprehensive Environmental Planning (3)
Seminar which examines the application of the principles and practices of comprehensive planning at the urban and regional levels emphasizing the implications of the natural environmental characteristics of an area while addressing the social, economic, and physical environmental needs of a community.

ENV 5377 Landscape Ecology (3)
Cross-listed as BIO 5377
See BIO 5377 for course information.

ENV 5379 Ecosystem Management (3)
Pre-requisite(s): Graduate standing or permission of instructor
A seminar in the application of ecological principles to the management of terrestrial, freshwater and marine communities and ecosystems. An overview for students from all environmental specialties with an emphasis on case histories.
